

CAAB V2 (2.48) RELEASE NOTES

1 ENHANCEMENTS

- CAAB XL Email services (Call Alerts and Scheduled Reports to Email) now uses the CAAB. Emailer service and no longer requires Outlook Express.
- CAAB XL includes a new configuration tool for CAAB Emailer setup.
- Scheduled Reports now includes a “Run Now” option for testing configuration.
- Scheduled Reports now handles outputting reports to a network location or UNC path.
- Added automatic filetype selection to Scheduled Reports when output to Email is selected (since email only supports output to PDF).
- Crystal Reports now uses TCP/IP only if Kerberos is in use (this avoids authentication issues).
- SMDR now includes a daily re-initialisation to refresh stale connections and free resources.

2 BUG FIXES

- Archiving Call Records to CSV was failing in some cases. This is now resolved.
- Restoring Call Records from XML was failing in some cases. This is now resolved.
- Hospitality Console - Fixed a bug where generating invoices for PIN users was not successful.
- Fixed a bug where generating Crystal Reports could return an error if accessing the database via Integrated Security. Windows username is now stored in the registry for Crystal functions to use.
